

Week 4

3-July to 8-July

Goals

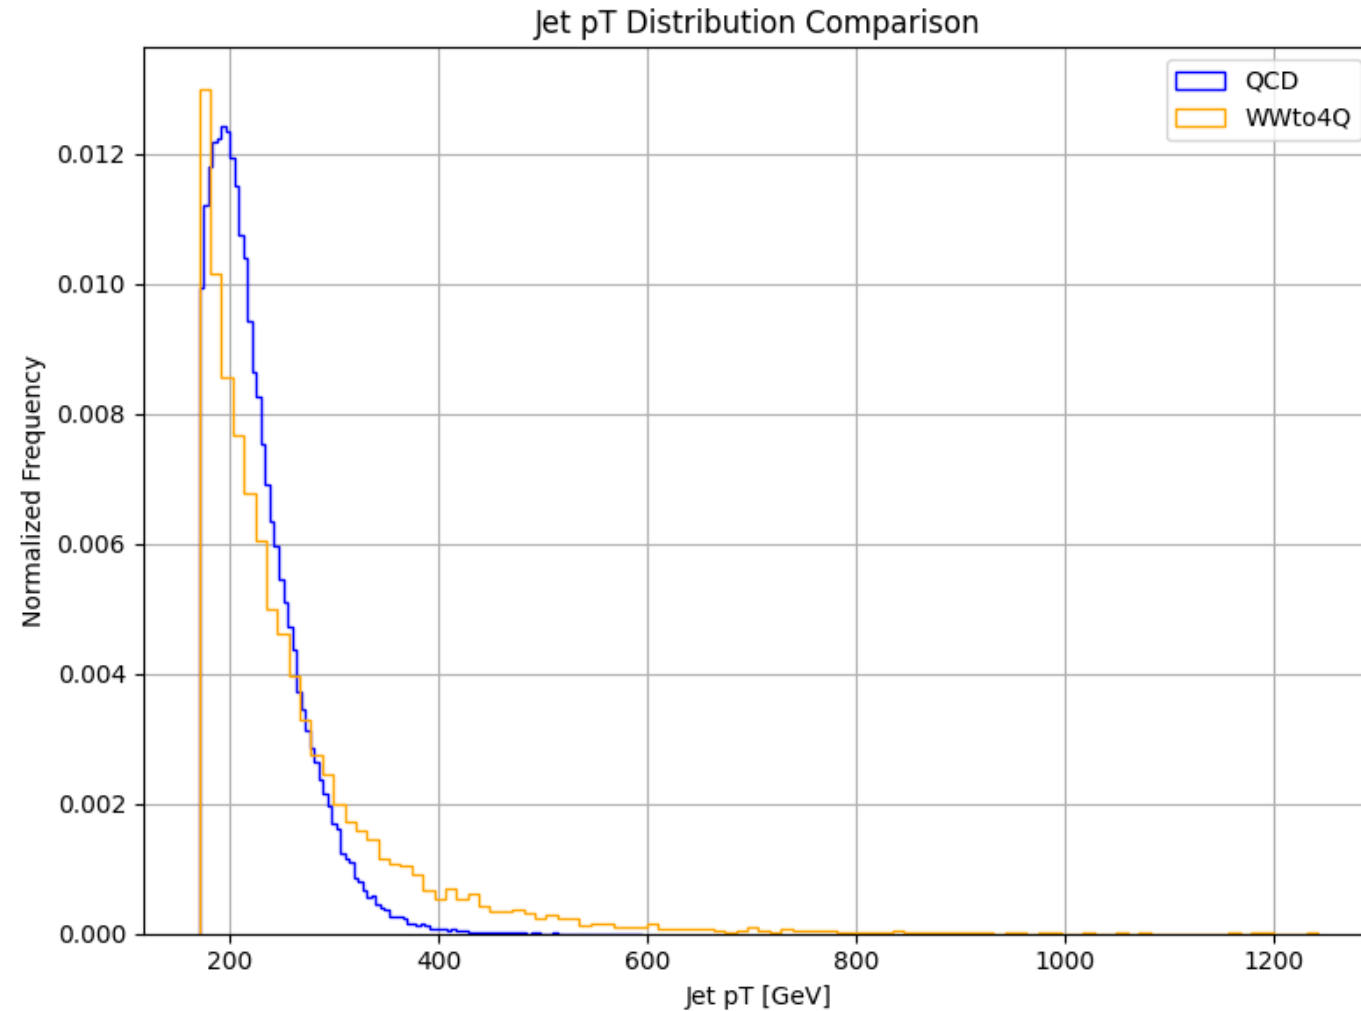

- Compare pT for both samples – make sure they align

Samples Used

- QCD_PT-170to300_TuneCP5_13p6TeV_pythia8_1.root
- WWto4Q_TuneCP5_13p6TeV_powheg-pythia8_1.root

- QCD: 100k events
- WWto4Q: 15k events

pT Comparison

Next steps

- Run the model with the new data – check if it performs well with different edge values
- Implement decaying learning rate
- Expand search space in parameter sweep
- Make edges a combination of mass and distance
