

Week 3

27-June to 2-July

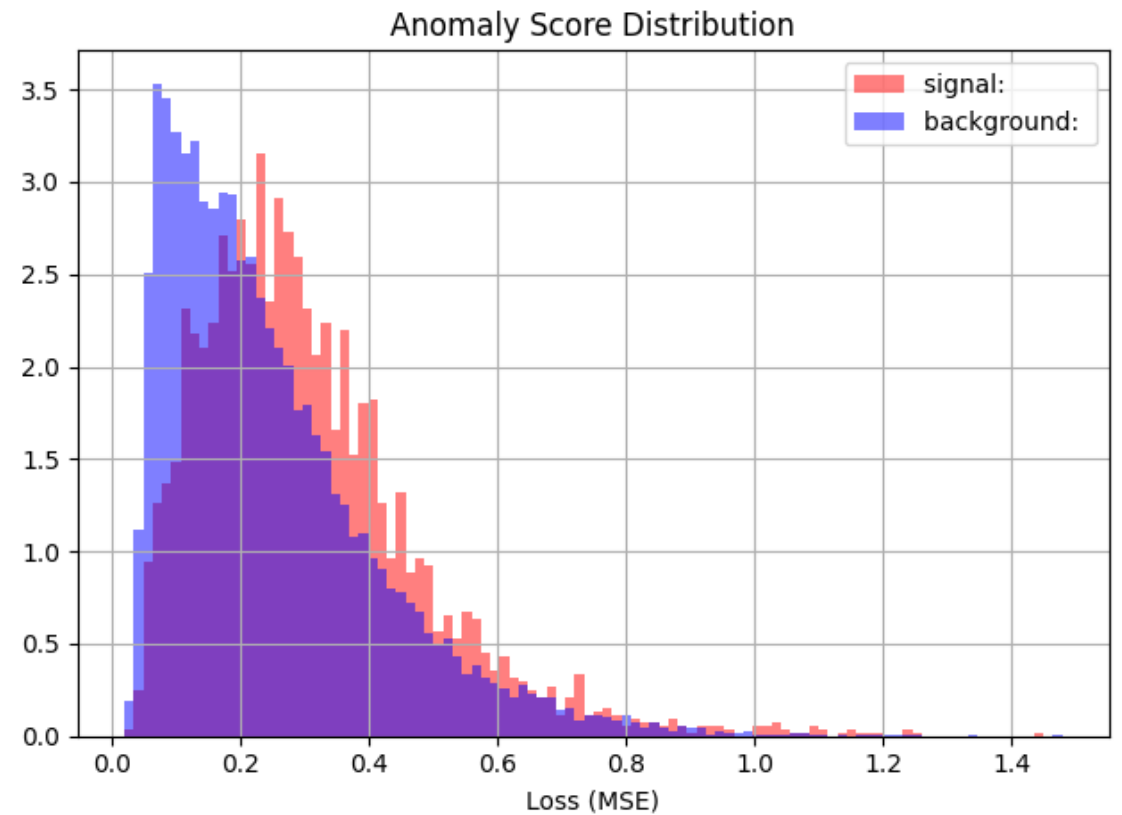

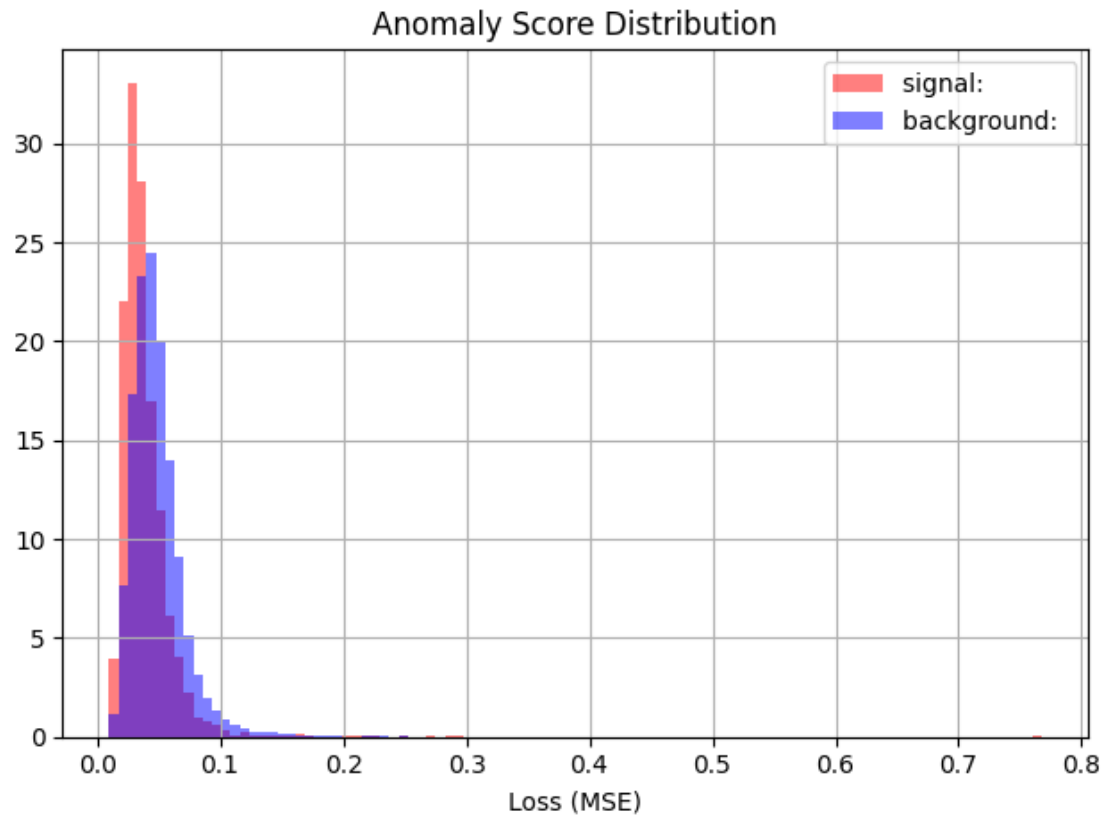

Goals

- Implement automated hyperparameter sweeps
- Change edge values to use mass instead of distance

Best Config by AUC

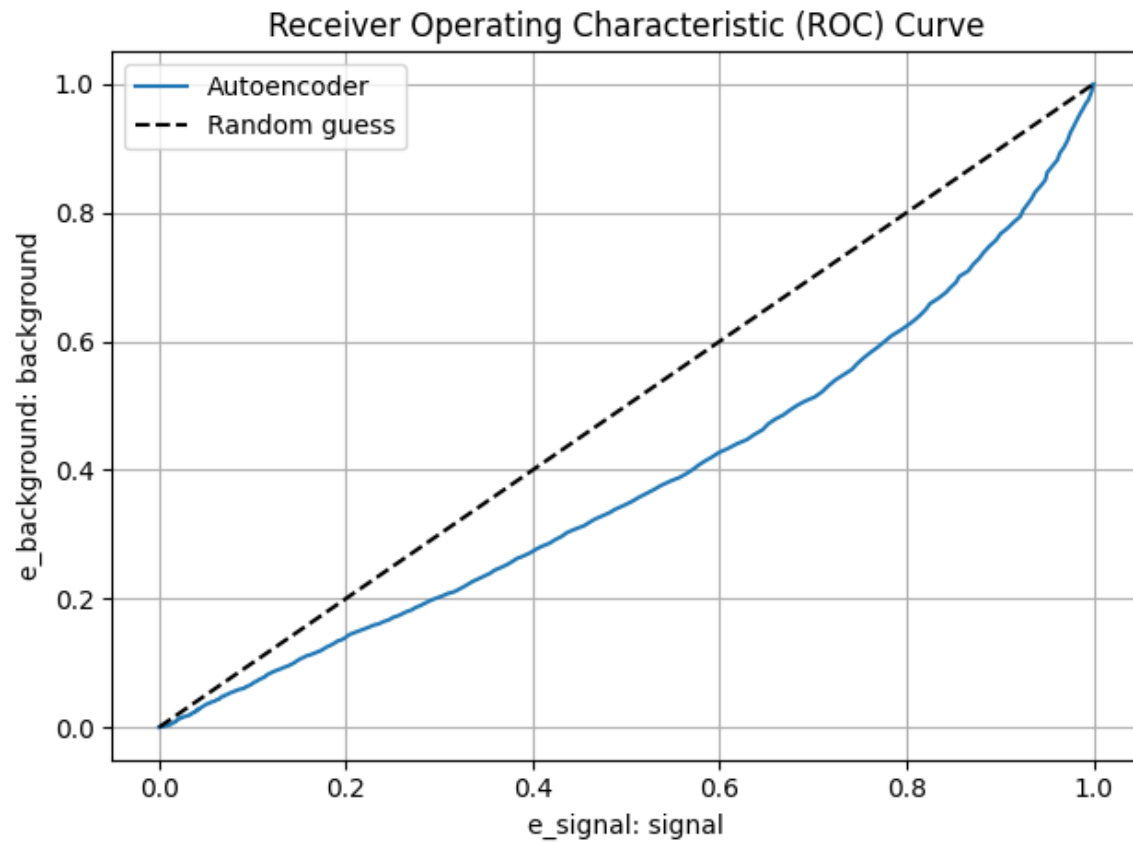

- Learning rate: 1e-05
- Nearest neighbours: 16
- Smallest dimension: 16

Anomaly Score

ROC Curve

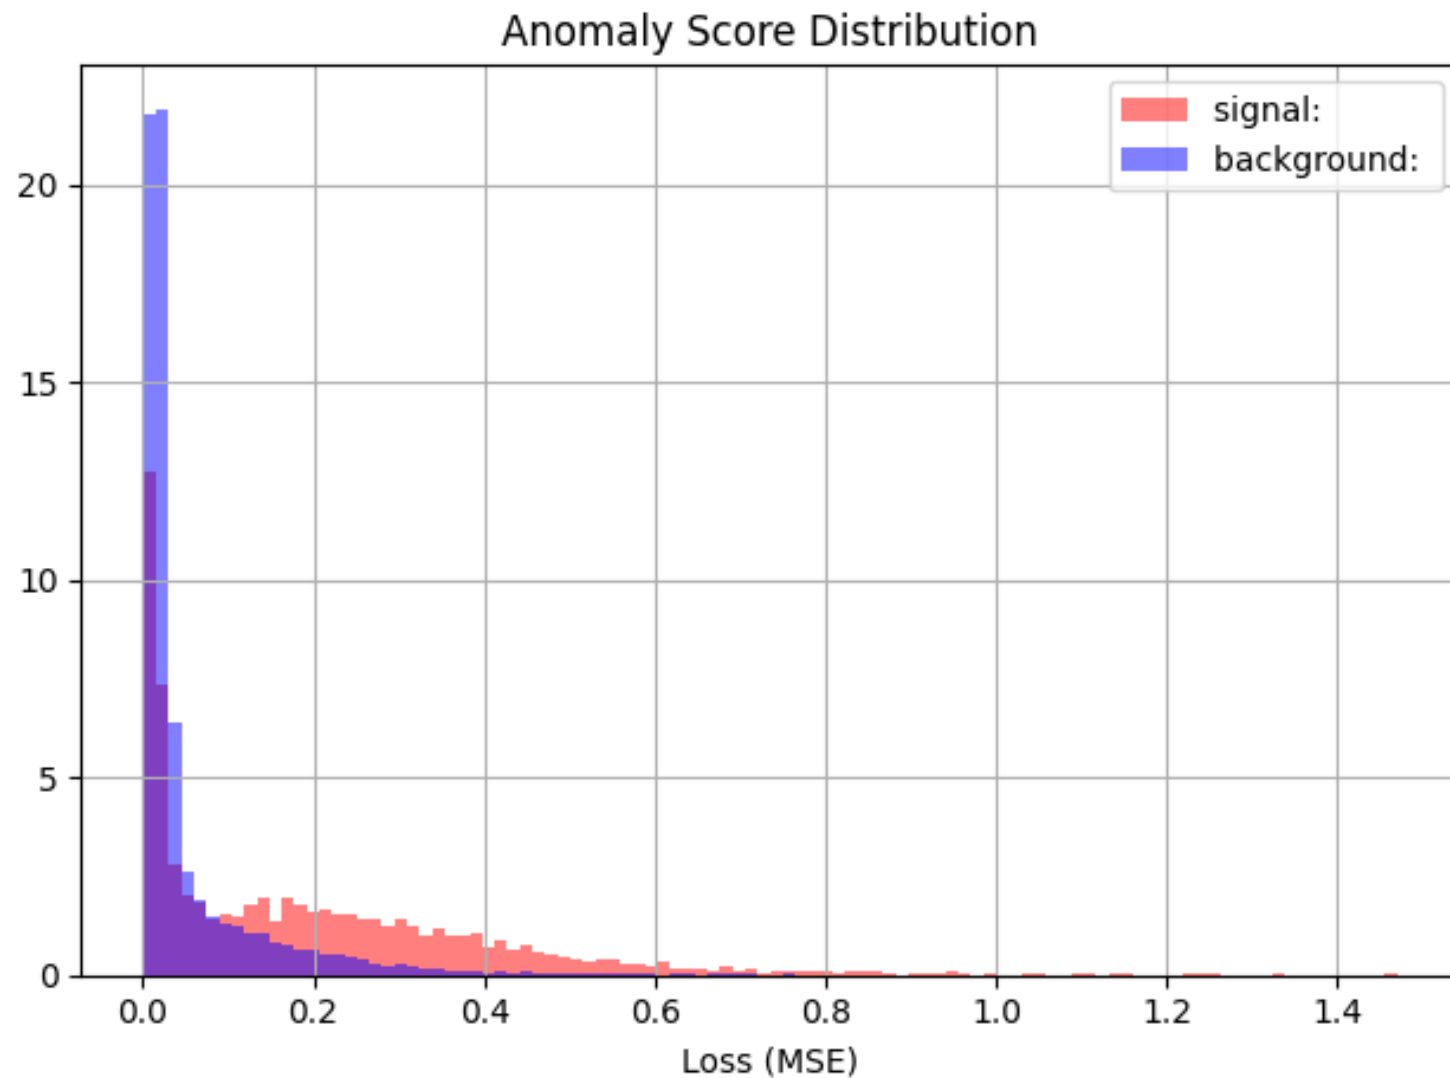

AUC = 0.616

Best Config by Valuation Loss

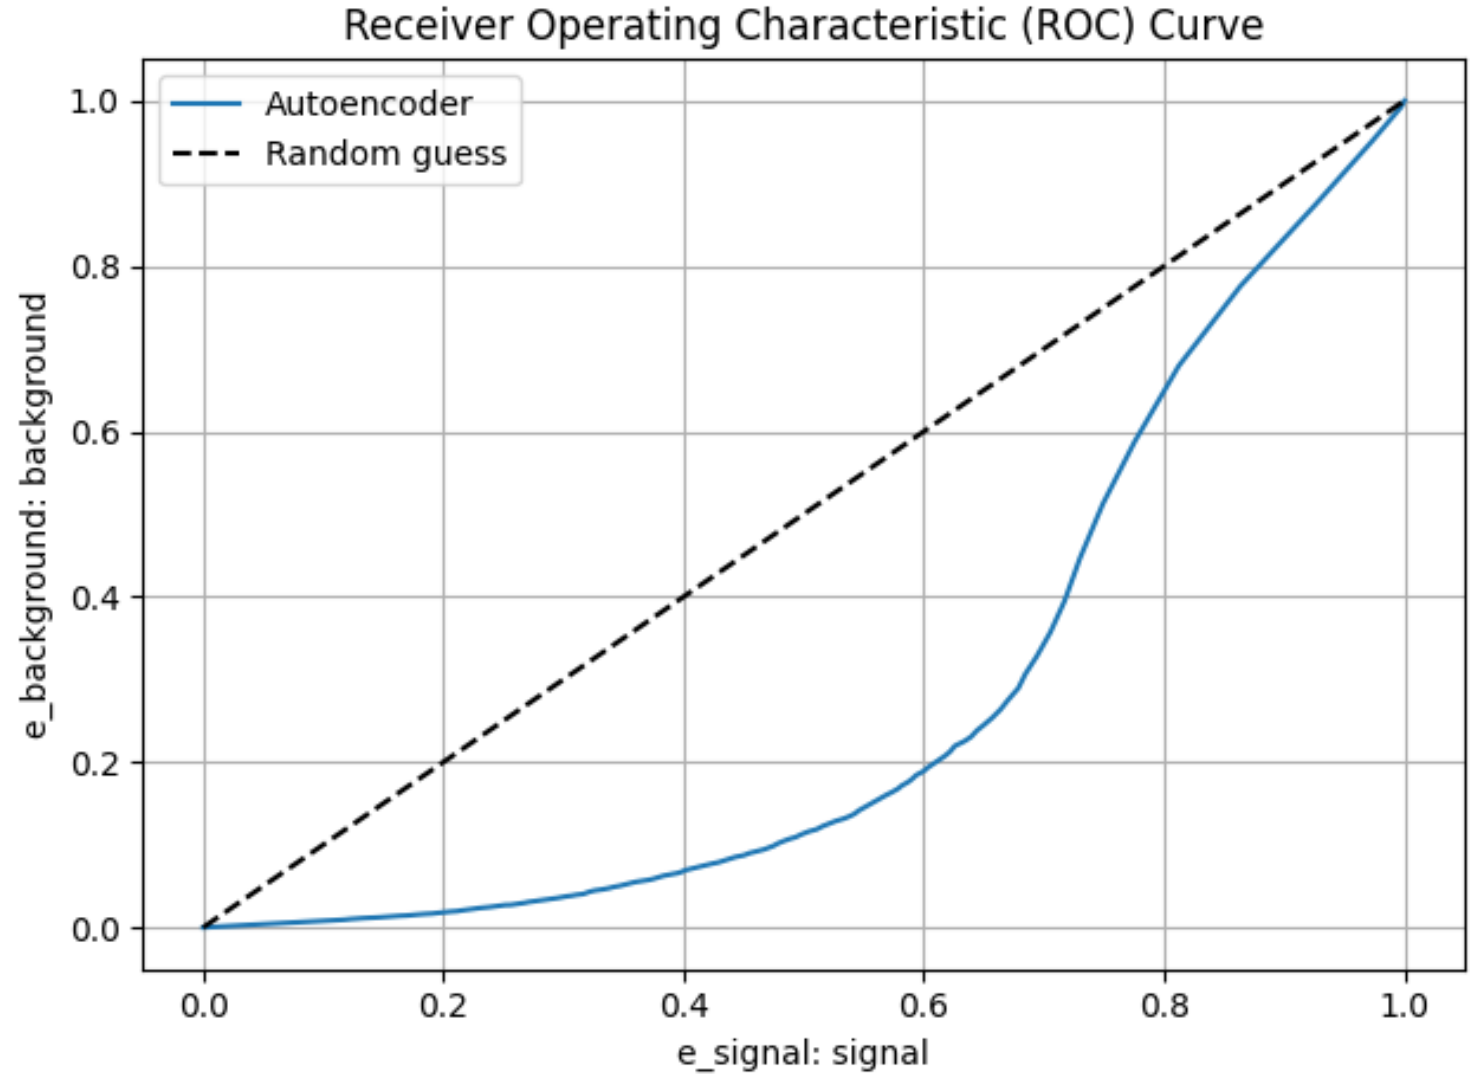

- Learning rate: 1e-04
- Nearest neighbours: 8
- Smallest dimension: 16

Anomaly Score

ROC Curve

AUC = 0.725

Next Steps

- Edges as a combination of distance and mass
- Run for more epochs?
- Test with data other than WJets
